

Research Vocabularies Australia repository

Vocabulary Repository

The basis of the RVA repository is the [Sesame Server and its API](#). RVA portal users can upload vocabulary data in formats such as CSV and PDF, but RDF formats (such as RDF/XML and Turtle) are treated specially in that they contain concepts which may be extracted for indexing. In addition, users can select an option for their RDF data to be imported into Sesame, and, if desired, that SISSVoc endpoints be created. If the data is imported into Sesame, the SPARQL endpoint is enabled.
