

Importing a vocabulary to PoolParty [RDF]

ARDC and our partners use the [PoolParty Thesaurus Server](#) for the purposes of vocabulary creation and management. Information captured in PoolParty will feed into the RVA repository and portal. In order to upload your vocabulary file into PoolParty, please follow the following steps:

Sign in to PoolParty at <https://ands.poolparty.biz/PoolParty/l/auth/login> with your ARDC-provided credentials.

Locate the PoolParty **Project** in which your vocabulary will be uploaded

Select **Project > Import > RDF Project Import** .

Select the file to be uploaded. Select the checkbox next to "Import Assistant"

PoolParty Import Assistant will assess your file for import.

For information on using the PoolParty Import Assistant, open the [PoolParty manual](#) and search for PoolParty Import Assistant

Once imported, your vocabulary will appear as a **Concept Scheme** in your PoolParty project
